

Barber Ranch

ANNUAL BULL SALE

NOVEMBER 9, 2022

11:00 a.m. Wednesday

Jordan Cattle Auction

San Saba, Texas

Live bidding on superiorlivestock.com

109 Barber Ranch *Hereford* Bulls

39 Express Ranches *Angus* Bulls

Fellow Cattlemen & Cattlewomen,

On behalf of the Barber family, we would like to thank you for your interest in our offering. We look forward to you seeing and evaluating this year's bulls! Commercial cattle prices are currently up and are predicted to continue to climb, making now a perfect time to procure higher-end seedstock that can produce calves that can mash scales down as well as replenish your herd with top quality replacements.

Regardless of the market or rainfall conditions, our focus remains the same each year—to produce the best Hereford cattle possible. These bulls are all DNA tested and have genomically enhanced EPDs, which improves their EPD accuracy tremendously. There is enough data backing these bulls to predict how their calves will perform before you ever turn them out. We also continue to ultrasound our bulls so that you can make informed decisions and so that we know which genetics perform the best for our own improvement.

We always appreciate cattle that have eye appeal and great phenotypes. Our cattle have more look, muscle, body and bone than the typical Hereford herd. We have also selected more dark red cattle with extra pigment. We mate the best Hereford cattle possible to offer you a combination of horned, polled, and homozygous polled Herefords.

Our bulls are developed in large, mostly native grass pastures with limited supplemental feed. They will be in ideal condition to go to work. Some will be purchased as herd sires for other registered operations, but the majority will sire calves in the commercial sector. There are several bulls this year that excel in baldy maker traits as well as Brahman influence traits. Many of our customers have topped their local markets with BR-sired calves as well as sold extremely high on Superior Livestock Auction over the years.

This auction offers you second-to-none, one-stop shopping, as Express Ranches will again be offering top quality Angus bulls. We encourage you to invest with confidence, knowing that your purchases are backed by a 100% satisfaction guarantee. With the opportunity to buy from two of the most prominent US breeding programs in one place, there is no better time to strengthen your herd. Selecting high performing, efficient bulls to sire your next calf crop is an important economic decision that YOU can control.

Come early and enjoy some Texas hill country hospitality Tuesday evening before the auction. We will have the legendary barbecue chef, Jay West, cooking dinner. To our past and future customers and to all those who make this possible, THANK YOU and WELCOME to this year's auction. We look forward to seeing you in San Saba!

The Barber Family

AIR TRANSPORTATION

The Austin-Bergstrom International Airport, in Austin, is the closest large airport; drive time to San Saba is approximately two hours. San Saba has a 4200-foot lighted and paved runway, 5 miles from the auction barn. Phone (325) 372-3380, airnav.com/airport/81R.

"SIGHT-UNSEEN GUARANTEE"

To make buying easy, we offer a sight-unseen guarantee.
 Leave a bid...buy over the phone...buy through Superior.
 If they don't meet your approval, they come home. It's that simple.

Bulls will sell in catalog lot order.

View the videos online:
barberranch.com

If you are unable to attend the sale, please log on to superiorlivestock.com for online bidding, or give us a call and we can assist you with your purchases.

SALE TERMS & CONDITIONS

TERMS: Cash or check. Cattle will be sold to the highest bidder. The auctioneer shall settle any disputes as to bids. All cattle are to be paid for by the purchaser during or immediately following the sale and will not be released until after settlement has been made. Each animal will be at the purchaser's risk immediately after it is sold.

HEALTH: The health of the cattle selling is excellent. Each animal will be accompanied by an individual health certificate for immediate interstate shipment. **Note:** If bulls should go to a state that requires additional testing, bulls will be delivered to the new owner after testing is completed.

GUARANTEE: Unless stated otherwise, each bull will sell under the Suggested Terms and Conditions of its respective breed registry, either the American Hereford Association or the American Angus Association.

BREEDING GUARANTEE: Bulls sold in this sale are fertility tested and are guaranteed by the owners to be breeders, provided they are properly handled and cared for by the purchaser. Any bull failing to breed after a trial of six months may be returned to the seller **if in good condition**. The seller reserves the right to try said bull for six months, and if it proves a breeder to return him to the buyer at buyer's expense. If the bull proves a non-breeder, the bull will be replaced, or credit will be issued for the next year's sale at the purchase price minus salvage value of the bull. Seller is not liable for bulls lost due to injury or death.

ANNOUNCEMENTS: Announcements made sale day from the auction block will take precedence over statements in the catalog or other advertising. We reserve the right to withdraw any sale lot not meeting our specifications prior to sale time.

LIABILITY: All persons who attend the sale do so at their own risk. Neither the owners, Jordan Cattle Auction nor any other persons connected with the sale assume liability, legal or otherwise, for accidents or loss of property.

The bulls will be at Jordan Cattle Auction at San Saba ready for viewing beginning Tuesday, November 8th.
 Prior to Tuesday, you are invited to stop by either of the ranches to take a look.

• • • • •

Barber Ranch reserves the right to collect, freeze and use semen within their own herd on any Hereford bull sold in this sale.
 Semen collection would be done at Barber Ranch's expense and the buyer's convenience.

• • • • •

Barber Ranch reserves all cloning rights on Lots 1-109.

ABSENTEE BIDDERS: HOW TO PARTICIPATE ON THE PHONE OR ONLINE

We have made preparations to bid and buy livestock through Superior Productions' "Call or Click-To-Bid" service for buyers unable to attend in person on sale day. Please note that all of the lots in the sale will also be available for viewing online prior to sale day at:
www.superiorlivestock.com.

Here's How It Works...

Turn in Bids Over the Phone. This is our traditional method of buying livestock and is the suggested process for anyone who does not have excellent, high-speed internet. To get started, simply go online to www.superiorlivestock.com and click on the tab titled "Register for a Buyer Number." Select the registration form for Superior Productions and print the registration form. Fill it out and fax it in to Superior Productions at (817) 378-3380 with a signature on it. You can also mail it in to the address provided on the form. Upon receipt of this information, Superior will call you with a buyer's number and the bid line phone number that you will use on sale day to place bids over the phone.

Click-To-Bid. This is Superior's online bidding program for cattle buying. *Please note that high speed internet is required—this is not for dial-up or satellite internet.* Registration is free, but you must become a member of www.superiorclicktobid.com to sign up. Becoming a member is easy; just go to the home page of www.superiorclicktobid.com and follow the outlined steps to get started. Input your information and select a username and password. You will receive an e-mail confirming you are a member. From that point forward, you just have to sign in and select the sale you would like to register for and, once approved by the ranch, you will receive an e-mail confirming which sale you are now registered for.

Viewing the Auction. Sale will be broadcast via satellite on Dish Network channel 997. *Please note that there is a short delay if you are watching the auction on television, so be sure to call in a couple lots ahead of the lot you are interested in bidding on.* The sale will also be broadcast live on the internet at both www.superiorlivestock.com and www.superiorclicktobid.com. The video feed on the homepage of www.superiorlivestock.com looks the same as the video feed on TV and can be watched over a smartphone or tablet. Remember, you can call in to bid whether watching on the TV or on the internet, but you must be a member of www.superiorclicktobid.com to "click-to-bid."

Buyers will be contacted by the ranch after the sale for payment and delivery details.

IF YOU NEED ANY ASSISTANCE, CALL SUPERIOR: (800) 422-2117

Contact these Superior Livestock representatives to buy bulls or to sell calves sired by bulls purchased in this sale:

ALL BULLS IN THIS SALE QUALIFY FOR SUPERIOR PROGRESSIVE GENETICS

Superior Progressive Genetics (SPG) is a Value Added Program launched by Superior Livestock Auction to create a premium for commercial cattlemen when they sell calves on Superior by identifying load lots of cattle sired exclusively by bulls purchased directly from qualified seed stock producers. SPG brings attention to the investment commercial cattlemen have made by doing business with leading seed stock producers. Barber Ranch or Express Ranches and their bull buying customers will be recognized by branding the SPG icon and the Barber Ranch or Express Ranches logo on qualified load lots as the cattle sell on Superior's video sales live on television and the internet. In addition to the qualified lots being identified on television, the lots will also be branded as "SPG" in Superior Livestock Auction's print and web sale catalogs.

Additional Benefits to Commercial Cattlemen Selling on Superior:

- ✓ Doing business with a reputable company who has your best interest in mind.
- ✓ Superior ties the commercial and purebred cattle industry together full circle.
- ✓ Largest cattle auction in North America along with the largest active buyer list.
- ✓ Can sell on contract to take advantage of current market conditions and deliver at a later date.
- ✓ Established premiums for cattle on good health programs.
- ✓ Established premiums for many Value Added Programs.
- ✓ Cattle are sold "country fresh" direct from the ranch, resulting in less stress.
- ✓ Seller determines weighing conditions.
- ✓ Seller does not have the expense of trucking.
- ✓ Payment is guaranteed to sellers through Superior's bonded custodial account.

**For more information, contact Superior at (800) 422-2117
or visit www.SuperiorLivestock.com.**

Using EPDs as Selection Tools

Cattle Evaluations use the term Expected Progeny Difference (EPD) to express genetic transmitting ability of a sire for the various traits listed. An EPD is a prediction of how future progeny of a sire are expected to perform in a particular trait, relative to other sires in the analysis. The key word is "difference." The EPD itself does not imply "good" or "bad" performance; rather, the EPD gives a prediction of the average "difference" to expect in the performance of a sire's progeny relative to other sires in the same analysis.

The EPD for a given trait on each animal in the analysis is compared to every other animal in the analysis. The EPD is reported as a plus or minus value in the unit which the trait is measured. EPD accuracies on non-parent animals are relatively low and are not reported in this catalog. The American Hereford Association (AHA) measures 17 traits and calculates three profit (\$) indexes. A comprehensive sort of Hereford sires can also be done online at www.hereford.org.

Important: No across-breed EPD comparisons can be made.

Hereford EPDs and \$ Indexes included in our sale catalog are:

Calving Ease Direct (CED) Based on calving ease scores and birth weights and measured on a percentage. CED EPD indicates the influence of the sire on calving ease in females calving at two years of age. For example, if sire A has a CED EPD of 6 and sire B has a CED EPD of -2, then you would expect on average if comparably mated, sire A's calves would be born with an 8% more likely chance of being unassisted when compared to sire B's calves.

Birth Weight EPD (BW) An indicator trait for calving ease, measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty.

Weaning Weight EPD (WW) An estimate of pre-weaning growth, measured in pounds.

Yearling Weight EPD (YW) An estimate of post-weaning growth, measured in pounds.

Scrotal Circumference EPD (SC) Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty.

Maternal Milk EPD (Milk) The milking ability of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. This difference in weaning weight is due to total milk production during the entire lactation.

Maternal Milk + Growth EPD (M+G) Reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of daughters' progeny weaning weight. It is equal to one-half the sire's weaning weight EPD, plus all of his Milk EPD.

Calving Ease Maternal (CEM) Predicts how easily a sire's daughters will calve at two years of age and measured on a percentage. For example, if sire A has a CEM EPD of 7 and sire B has a CEM EPD of -3, then you would expect on average if comparably mated, sire A's daughters would calve with a 10% more likely chance of being unassisted when compared to sire B's daughters.

Carcass EPDs

Carcass records are adjusted to an age constant endpoint. Therefore, selection based on any or all of the carcass merit EPD is comparable among cattle at the same age endpoint. For example, selection based on increased EPD for carcass weight will result in heavier carcass weights than those animals with lower EPD for carcass weights when the cattle are harvested at the same age.

Carcass Weight EPD (CW) Carcass weight is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight.

Ribeye Area EPD (REA) REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also

American Hereford Assn. Fall 2022 EPD Averages for 2020/2021 born calves:

CED	BW	WW	YW	SC	Milk	M+G	CEM	CW	REA	Marb	BMI\$	BIIS	CHBS
+2.8	+2.8	+54	+87	+1.0	+26	+53	+1.9	+68	+41	+12	+342	+413	+115

incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Marbling Score (Marb) Marbling EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat (IMF) based on carcass measurements of harvested cattle. Breeding cattle with higher Marb EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

\$Profit Indexes

Baldy Maternal Index (BMI\$) The Baldy Maternal Index is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed toward Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake but a positive weighting on Carcass Weight, which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Ribeye Area are also positively weighted to keep the harvested progeny successful for CHB. This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.

Brahman Influence Index (BIIS) The Brahman Influence Index is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed toward a commodity beef market, since Certified Hereford Beef does not accept Brahman-influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk, which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake but a positive weighting on Carcass Weight, which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and Ribeye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. This index targets producers who use Hereford bulls on Brahman-influenced cows.

Certified Hereford Beef Index (CHBS) The Certified Hereford Beef Index is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows and all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight to ensure profit on the rail. As well, there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. Keep in mind, this production system takes advantage of complimentary breeding with the commercial Angus cow. Although Marbling is weighted positively in this index, a positive weighting for Ribeye Area and a negative weighting for Back Fat are a greater priority in this index to allow for optimum end-product merit. This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.

EPDs are updated weekly by the American Hereford Association, so we cannot guarantee the EPDs listed in the catalog. The Hereford EPDs printed are from the 10/3/22 evaluation of the AHA. View up-to-date EPDs at www.hereford.org.

Genomic-Enhanced EPDs The accuracy of breeding values in young cattle is enhanced with DNA testing. All EPDs included are genomically enhanced for the advantage of enhanced accuracy, equal to each bull already having performance on 17 of his own calves for calving ease, 8 calves for birth weight, 12 calves for weaning weight, and 9 calves for yearling weight!! There is enough data backing these bulls to be able to predict how their calves are capable of performing—even before they are conceived.

Each animal tested is recognized with the AHA GE-EPD logo.

AHA Trait	Accuracy Improvement	Effective Progeny Number Increase*
Calving Ease	0.09	17
Birth Weight	0.12	8
Weaning Weight	0.14	12
Yearling Weight	0.16	9
Scrotal Circumference	0.17	6
Mature Cow Weight	0.12	4
Udder Suspension	0.17	7
Teat Size	0.17	7
Carcass Weight	0.11	3
Fat	0.08	2
Rib-Eye Area	0.07	2
Marbling	0.10	3

* Effective Progeny Number Increase (EPNI)- EPNI is the difference gained for genotyped animals versus non-genotyped animals.

Visit HerefordAdvantage.com to get started today!

An industry-changing program from the American Hereford Association and IMI Global to verify and add value to Hereford-influenced feeder cattle with superior genetics, health and management.

REQUIREMENTS

- **Source & Age verification**
- **Genetic merit**
 - Minimum of 50% Hereford genetics
 - Bull battery ranking in top 50% of breed for \$CHB index (bull battery average)
 - Bull ownership transferred (all bulls)
- **Vaccination program – two rounds of vaccinations pre-weaning (minimum)**
 - Recommended minimum protocol:

- **BQA certification**

American Hereford Association | (816) 842-3757 | 11500 NW Ambassador Drive, Suite 410, Kansas City, MO 64153 | HerefordAdvantage.com

BENEFITS

- **Genetic improvement tool**
 - **Sire EPD and profit index summary**
- **Added market exposure**
 - **Free listing at HerefordMarketplace.com**
- **Enrollment cost - \$3.00/hd. (verification + eID tag)**

Look for this logo in Hereford bull sale catalogs to identify sires meeting the genetic requirements for the Hereford Advantage program.

✓ Competition for the selection of Lot 1 was fierce at Barber Ranch this year! Lots 1, 2 and 3 have been standouts since birth. 1208's overall depth and spring of rib plus his powerful hip edged him into the Lot 1 position. His dam is an exceptional female that is a maternal sister to our herd bull Genesis. We have just calved out our first Blueprint daughters, and they are extremely impressive.

✓ 1208 ranks in the top 5% of the breed for YW; top 10% for WW and M+G.

LOEWEN DMF B42 63A F6 ET
Dam of Lot 1

The bulls selling are DNA tested and have genomic-enhanced EPDs. The accuracy of these EPDs is equal to each Hereford bull already having performance recorded on 17 of his own calves for calving ease, 8 calves for birth weight, 12 calves for weaning weight, and 9 calves for yearling weight! There is enough data backing these bulls to be able to predict how their calves are capable of performing—even before they are conceived.

- ✓ 1037 is a dark red, goggle-eyed, horned bull that is sired by one of the Hereford breed's most dependable calving ease sires, Distinction. 1037's sire is a trait leader in 14 categories, including an 18.2 calving ease EPD.
- ✓ 1037 ranks in the top 1% of the breed for BI; top 5% for M+G, Marb, BMI, CHB.

BARBER RANCH, located 60 miles northwest of Amarillo Texas, is a nationally recognized name in the production of purebred Hereford cattle. Family owned and operated for over 115 years, the ranch currently has over 350 horned and polled cows roaming the plains and canyons of Channing, Texas.

At Barber Ranch, family comes first. Three generations are currently involved in the day-to-day operations of the ranch. Visit us on a summer day and you are likely to find the eldest generation, Dale and Mary, riding horseback checking pastures...the second-generation Brett bailing hay with Justin working a set of calves...and grandkids Bryden and Aidyn working on show cattle in the barn. While daughter Terri, son Jason, and granddaughter Rylee are not on the ranch full-time, they stay involved through the marketing and promotion of Barber Ranch cattle through live and online sales and at shows throughout the country.

The cow families behind the cattle at Barber Ranch see the same multi-generation influence as the human family. Study the pedigrees of the donors, herd sires, and cattle selling, and you will often find the BR prefix on the maternal side of the pedigree going back generation upon generation. Names like Gabrielle, Abigail, Goldriel, Anastasia and Belle have become synonymous with in-demand bulls and females alike, while progeny have gathered some of the top show accolades across the country.

While the show accolades are appreciated by the Barber family, producing real world bulls to sell every year in this San Saba Bull Sale is the engine that keeps the operation moving forward. Bulls are developed at the ranch in the tough climate the Texas panhandle is known for, often being grouped in 100+ acre pastures throughout the spring, summer and fall to prepare them to cover cows after the sale. In response to customer demands, every bull that will go through the 2022 sale will have genomic-enhanced EPDs available to complement the physical evaluation by the buyers. Barber Ranch believes strongly in the value of DNA testing and encourages cattlemen to employ the results in their breeding program.

Everyone at Barber Ranch invites you to stop in if you ever find yourself near Channing. We will be happy to show you the herd we have worked so hard to build and aim to improve for generations to come!

✓ J043 is Barber Ranch pedigree royalty. Take the guesswork out of selecting the bull that could make the most positive impact in your herd with this son of Belle. Belle has 53 progeny serving in progressive herds all across the United States. Among them are Belle Air, her first natural calf as a two-year-old who was selected Denver National Supreme Champion twice, and national champions Compton and Big Country. She is the dam of four of our main herd sires: Travis E132, Kingston H028 and Belle Air E133 as well as a full brother to J043, Silverado.

✓ J043 ranks in the top 1% of the breed for WW and YW; top 5% for CHB.

✓ 1055's sire, E132, has consistently sired some of the most outstanding individuals at Barber Ranch. Adding 124Y and Belle into the pedigree makes him a sure bet to be a top breeding bull. 1055's Aventus/Sooner-bred dam is a picture-perfect female with a balanced udder. 1055 has a great phenotype and is as athletic as they come.

✓ Ranks in the top 10% of the breed for REA. With a 1.3 REA/cwt. ratio, he should add muscle.

- ✓ 1103 has not one, not two, but three shots of our potent Sooner X Gabrielle mating in his pedigree. He is a double red eyed, dark red, powerful bull with plenty of base width. He is out of an outstanding Trust daughter that has been awarded the DOD award by AHA.
- ✓ 1103 has one of the larger yearling scrotal measurements at 40.9 cm.
- ✓ He ranks in the top 5% of the breed for WW, YW; top 10% for Marb, CHB.
- ✓ REA ratio 107, IMF ratio 113.

- ✓ Stout boned, wide based and should push the envelope when it comes to adding power and pounds to his calves. With that he also has a perfect uddered, ultra-feminine, picture-perfect dam.
- ✓ Ranks in the top 5% of the breed for WW, YW. Outstanding individual IMF ratio of 128.
- ✓ Full brothers sell as Lots 7, 55 and 56.

BARBER RANCH *Hereford* BULLS

The bulls selling are DNA tested and have genomic-enhanced EPDs. The accuracy of these EPDs is equal to each Hereford bull already having performance recorded on 17 of his own calves for calving ease, 8 calves for birth weight, 12 calves for weaning weight, and 9 calves for yearling weight! There is enough data backing these bulls to be able to predict how their calves are capable of performing—even before they are conceived.

+64	+1.36	+47	+61	+61	+0.13	+63	+56	+84	+49	+137	+239

The Angus bulls selling have Genomic Enhanced Expected Progeny Differences. EPDs that traditionally contained all pedigree, performance and progeny information now also include results from available genomic, or DNA, tests. Breeders who use genomic technology give buyers access to AGI-generated GE-EPDs that provide: increased predictability and decreased risk for young and unproven animals due to enhanced accuracy of EPDs; better characterization of genetics for difficult-to-measure performance traits (such as carcass traits, maternal traits and feed efficiency); the ability to make more rapid progress for traits that are important to you, due to more accurate selection, easier identification of genetic outliers and the ability to propagate young animals with confidence earlier in their lives. In fact, GE-EPDs on unproven animals have the same amount of accuracy as if they had recorded 8 to 33 calves, depending on the trait. That's valuable insight, offered regularly through the Angus breed's weekly national cattle evaluation at www.angus.org.

Calving Ease Direct (CED) is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight EPD (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight EPD (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Dry Matter Intake (DMI), expressed in pounds per day, is a predictor of difference in transmitting ability for feed intake during the postweaning phase, compared to that of other sires.

Scrotal Circumference EPD (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

Docility (Doc), is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility. It predicts the average difference of progeny from a sire in comparison with another sire's calves. In herds where temperament problems are not an issue, this expected difference would not be realized.

Claw Set EPD (Claw) is expressed in units of claw-set score, with a lower EPD being more favorable, indicating a sire will produce progeny with more ideal claw set. The ideal claw set is toes that are symmetrical, even and appropriately spaced.

Foot Angle EPD (Angle) is expressed in units of foot-angle score, with a lower EPD being more favorable, indicating a sire will produce progeny with more ideal foot angle. The ideal is a 45-degree angle at the pastern joint with appropriate toe length and heel depth.

Heifer Pregnancy (HP) is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction, and the EPD is reported in percentage units.

Calving Ease Maternal (CEM) is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk EPD (Milk) is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Carcass Weight EPD (CW), expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling EPD (Marb) is expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area EPD (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness EPD (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

\$Value Indexes An economic selection index allows multiple change in several different traits at once pertaining to a specific breeding objective. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires if the sires were randomly mated to cows and if calves were exposed to the same environment.

Maternal Weaned Calf Value (\$M), an index expressed in dollars per head, predicts profitability differences from conception to weaning, with the underlying breeding objective assuming that individuals retain their own replacement females within herd and sell the rest of the cull female and all male progeny as feeder calves. The model assumes commercial producers will replace 25% of their breeding females in the first generation and 20% of their breeding females in each subsequent generation. Traits included are as follows: calving ease direct, calving ease maternal, weaning weight, milk, heifer pregnancy, docility, mature cow weight, claw set and foot angle.

Weaned Calf Value (\$W), an index expressed in dollars per head to predict profitability differences in progeny due to genetics from birth to weaning. The underlying objective being producers will retain 20% of the female progeny as replacements and sell the rest of the cull females and their male counterparts as feeder calves. Traits included are as follows (in no particular order): birth weight, weaning weight, milk and mature cow weight.

Feedlot Value (\$F), an index expressed in dollars per head to predict profitability differences in progeny due to genetics for postweaning feedlot merit compared to the progeny of other sires. The underlying objective assumes producers will retain ownership of cattle through the feedlot phase and sell fed cattle on a carcass weight basis, but with no consideration of premiums or discounts for quality and yield grade. Traits contributing directly to the index are as follows: yearling weight (gain), carcass weight and feed efficiency.

Grid Value (\$G), an index expressed in dollars per carcass to predict profitability differences in progeny due to genetics for carcass grid merit compared to progeny of other sires. The underlying objective assumes producers will market cattle on an above-industry-average carcass grid. Traits included in the index are as follows (in no particular order): carcass weight, marbling, ribeye area and fat.

Beef Value (\$B), a terminal index expressed in dollars per carcass to predict profitability differences in progeny due to genetics for postweaning and carcass traits. This terminal index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase and market these animals on a carcass grid. Traits included in the index are as follows: yearling weight, dry matter intake, marbling, carcass weight, ribeye area and fat.

Combined Value (\$C), expressed in dollars per head, is an index which includes all traits that make up both Maternal Weaned Calf Value (\$M) and Beef Value (\$B) with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and eventually sell them on a quality-based carcass merit grid. EPDs directly influencing a combined index: calving ease direct (CED) and maternal (CEM), weaning weight (WW), yearling weight (YW), maternal milk (Milk), heifer pregnancy (HP), docility (Doc), mature cow weight (MW), foot angle (Angle), claw set (Claw), dry matter intake (DMI), marbling (Marb), carcass weight (CW), ribeye area (RE) and fat thickness (Fat).

- ✓ Excellent EPD spread on this son of EXAR Rolex that ranks in the top 5% of non-parent Angus bulls for yearling weight EPD.
- ✓ Top 4% Angle; top 5% \$F, YW; top 10% \$B, Claw; top 15% \$C; top 20% CW, WW; top 25% \$W, Milk.

Certified Angus Beef® Targeting the Brand

The Certified Angus Beef® Targeting the Brand logo identifies bulls with genetic predictions focused on carcass quality. The logo requirements are based on two key metrics: Marbling EPD and Grid Value (\$G). *Qualifying animals as of Fall 2022 have a minimum Marbling EPD (Marb) of at least +.65 and an Angus Grid Value Index (\$G) of +55 or higher.* Sire-identified carcass data from more than 8,600 records in the American Angus Association database show these minimum thresholds for Marb and \$G achieve an average of 50% CAB acceptance. While a sire's genetic potential only accounts for a portion of marbling performance in a calf crop, these benchmarks provide commercial cattlemen a starting place to identify genetics that will go on to bring performance premiums on quality beef grids. Realize that carcass traits need to be balanced with maternal traits and other economically important traits vital for progressive, profitable operations.

Tuesday evening, November 8th, for a
Special Pre-sale Steak Dinner,
prepared by legendary chef Jay West
...6 p.m. at the hospitality tent on the west side
of the Jordan pens, weather permitting;
otherwise, inside the sale barn cafe.

Central Life Sciences is a proud sponsor of the Barber Ranch Bull Sale

THREE REASONS INHIBIDOR™ IS BETTER THAN THE REST.

Larvicide, adulticide and synergist combine to protect cattle.

The new Starbar® Inhibidor™ Insecticidal Pour-On is a ready-to-use, triple action solution to defeat insects because we know good things come in threes. By controlling parasitic flies and lice, Inhibidor™ Insecticidal Pour-On can enable more efficient production through keeping your cattle comfortable, while protecting your bottom line.

To learn more about Inhibidor™ Insecticidal Pour-On and see all the Starbar® insect control products, visit StarbarProducts.com.

Always read and follow label directions. Inhibidor, Starbar and Starbar with design are trademarks of Wellmark International. The Red-Yellow color gradation is a registered trademark of Central Garden & Pet Company. ©2022 Wellmark International.

KA-CHING.

MORE POUNDS. MORE CALVES. MORE PROFIT.

Hereford bulls increase net profit by \$51 per cow per year.

That's \$20,000 in additional revenue for a typical 400-cow outfit, thanks to increased fertility and herd size.

Herefords are also the efficiency experts, proven to add value to calves in the feedyard — \$30 per head in profitability.

That's real money and real results.

COME HOME TO HEREFORD.

Hereford.org | 816-842-3757

Barber Ranch

Customer focused & success driven since 1904!

Ask our longtime customers Jim and Kathleen Hill at **H Ranch** from Channing, Texas, what our bulls have done for them. On a closeout of 127 steers harvested at Five Rivers Cattle-Hartley Feeders, 87% graded Prime or Choice with near 90% Yield Grade 2 or 3. Jim reported that over 85% of these steers were sired by bulls purchased from Barber Ranch. From pasture to rail, Barber Ranch genetics can elevate your next calf crop to premium levels.

Barber Ranch customer **Coby Schacher** (left) topped the Texhoma, Oklahoma, Livestock Auction spring 2021 with a set of baldy calves sired by Barber Ranch bulls. Texhoma LA manager/owner Ashley Noland stated that since Schacher has been consigning calves to his auction, they have consistently topped the market. Schacher's pens have sold the highest of any cattle sold in a particular week—all across the US. Let us help you get top dollar for your next calf crop.

Sneed Pool Cattle Co., Dumas, Texas, runs Barber Ranch Hereford bulls with black cows. Cody White, ranch manager, said, "Using Barber Ranch bulls has added 60 pounds to the calves' weaning weights. Udders have improved as well as the longevity and fertility of the replacement females by using the Baldy Maternal Index (BMI) in bull selections. The performance of our cattle fed out in the feedlot has improved as well by placing emphasis on the Certified Hereford Beef (CHB) index." Ask us about these and other valuable indices provided by the American Hereford Association and included with every bull we sell.

Scharbauer Ranches is a fifth-generation cow/calf operation that over the last seven years began retaining ownership of all its calves. "We tend to market our Hereford cattle either private treaty or see the process all the way to the end, where the beef ends up at our retail meat shop, Midland Meat Company in Midland, Texas. Barber bulls have been a go-to source for 20-plus years in our operations for a number of reasons. They are native to our area and do very well where we are located. They are consistently in the top 1% or 2% of all Hereford bloodlines. The conformation of the bulls is what we are looking for, and the bulls tend to have a very docile temperament and respect a horse. When selecting EPDs, we really like to focus on Yearling Weights, Ribeye and overall Yield Grade. Whether from Hereford cows or Angus cows, the majority of our keeper heifers are sired by Barber bulls. 'Quality' is what we strive for in both our ranching and meat operations, and the Barber Family and Barber bulls are synonymous with quality."

Barber Ranch genetics can elevate your next calf crop to premium levels!
