VETERANS DAY 2026

Barber RANCH

ANNUAL BULL SALE

WEDNESDAY, NOVEMBER 11, 2026

12 noon, Jordan Cattle Auction, San Saba, Texas

102 HEREFORD BULLS

16 HEREFORD BRED HEIFERS

51 ANGUS BULLS FROM EXPRESS RANCHES

SUSTAINABLY RAISED TO EXCEED YOUR EXPECTATIONS

Barber RANCH

122 years of family ranching

Barber Ranch is located 60 miles northwest of Amarillo, Texas.
Visitors are always welcome!

Greetings, Friends!

Welcome to this year's outstanding sale offering featuring MVPs in all categories ready to play an integral role in your herd's success! Strategically designed with longevity, performance, and profit in mind, you will find this stout set of bulls and elite bred heifers selected again from the heart of our herd amongst the most consistent, highest quality ever offered in our 122nd year of continuous family-owned operation. With five generations actively involved, Barber Ranch continues to offer the absolute best genetics with our 2026 edition featured here for the 18th consecutive year selling at Jordan Cattle Auction on the second Wednesday in November. We are also honored to have the legendary Express Ranches' final set of Angus bulls offered for sale here.

Our passion is providing exemplary beef genetics, and these cattle represent sustainably produced matings we stand behind with complete confidence to exceed your expectations. As we welcome the opportunity to discuss your program and how BR genetics can positively impact your next calf crop, our mission remains consistent: ***improve each generation while producing cattle that are functional, efficient, maternal, and profitable for every sector of today's dynamic industry.*** You will find many who could be "Lot 1" horned, polled, and homozygous polled bulls and females representing carefully planned matings of exceptional phenotype, performance, EPDs, and genomic data. Our goal is to produce herd builders with added muscle, body, bone, and structural integrity built to last with emphasis on calving ease/low birth weights to selective growth, high fertility, and carcass merit to best fit your program's goals. With replacement females fetching record prices, BR genetics can help you capitalize on producing top quality tiger stripes, baldies and purebred or commercial herd builders!

Barber Ranch remains committed to both purebred and commercial cattle producers. Every animal selling has been DNA tested and has genomically enhanced EPDs to provide improved accuracy in predicting progeny performance before turning them out. We are all thankful for timely rains, and the moisture received here in the Texas Panhandle has enabled us to develop these bulls primarily on our native grass pastures managed with limited supplement to ensure they are athletic, durable, and ready to go to work for you.

With today's continued commercial cattle prices still topping markets, selecting high-performing, efficient herd sires and replacement females is one of the most important economic decisions you can make. We are grateful for your confidence and loyalty in our program and look forward to your evaluation of this offering. Whether you plan to join us in person or online sale day, buy with confidence backed by our 100% satisfaction guarantee. Please reach out if you have any questions, and ***plan to join us Tuesday, November 10th, for our annual pre-sale dinner at Jordans.***

We would like to extend a special congratulations to Ken Jordan, our sale host for the past 18 years, who was recently inducted into the 2026 Cattle Marketing Hall of Fame! As many know, Jordan continues a 60+ year family legacy as an innovator combining traditional marketing values with today's technology in live internet bidding and social media—one of the many reasons we enjoy offering our genetics in the Hill Country, where industry icons like Jordan and our BR patriarch, Dale Barber, have their roots. Cheers to our past and future customers, and to everyone who makes doing what we love possible, THANK YOU! ***We look forward to welcoming you in San Saba!***

The Barber Family

11.11.2026

BARBER RANCH ANNUAL BULL SALE

12 noon CST, Wednesday, November 11

Jordan Cattle Auction, San Saba, Texas • 1310 US Hwy 190, San Saba, TX 76877

SALE DAY CONTACTS

AIR TRANSPORTATION

The Austin–Bergstrom International Airport, in Austin, is the closest large airport; drive time to San Saba is approximately two hours. San Saba has a 4200-foot lighted and paved runway five miles from the auction barn. Phone (325) 372-3380, *airnav.com/airport/81R*.

"SIGHT-UNSEEN GUARANTEE"

To make buying easy, we offer a sight-unseen guarantee.
Leave a bid…buy over the phone…buy online.
If they don't meet your approval, they come home. It's that simple.

Cattle will sell in catalog lot order, with the exception that the Angus bulls will sell following the Hereford bulls and before the Hereford heifers.

The cattle will be ready for viewing at Jordan Cattle Auction at San Saba beginning Tuesday, November 10th. Prior to Tuesday, you are invited to stop by either Barber Ranch or Express Ranches to view the lots selling.

• • • • •

Barber Ranch reserves the right to collect, freeze and use semen within their own herd on the Hereford bulls selling as Lots 1–101. Semen collection would be done at Barber Ranch's expense and the buyer's convenience.

• • • • •

Barber Ranch reserves all cloning rights on Lots 1–102 and 110–125.

SALE TERMS & CONDITIONS

TERMS: Cash or check. Cattle will be sold to the highest bidder. The auctioneer shall settle any disputes as to bids. All cattle are to be paid for by the purchaser during or immediately following the sale and will not be released until after settlement has been made. Each animal will be at the purchaser's risk immediately after it is sold.

HEALTH: The health of the cattle selling is excellent. Each animal will be accompanied by an individual health certificate for immediate interstate shipment. Each bull has passed a breeding soundness examination and has tested negative for trichomoniasis.

GUARANTEE: Unless stated otherwise, each animal will sell under the Suggested Terms and Conditions of its respective breed registry, either the American Hereford Association or the American Angus Association.

BREEDING GUARANTEE: Bulls sold in this sale are fertility tested and are guaranteed by the owners to be breeders, provided they are properly handled and cared for by the purchaser. Any bull failing to breed after a trial of six months may be returned to the seller ***if in good condition***. The seller reserves the right to try said bull for six months, and if it proves a breeder to return him to the buyer at buyer's expense. If the bull proves a non-breeder, the bull will be replaced, or credit will be issued for the next year's sale at the purchase price minus salvage value of the bull. Seller is not liable for bulls lost due to injury or death. The females selling have all been confirmed by ultrasound to be safe in calf and are considered breeders without further guarantee.

ANNOUNCEMENTS: Announcements made sale day from the auction block will take precedence over statements in the catalog or other advertising. We reserve the right to withdraw any sale lot not meeting our specifications prior to sale time.

LIABILITY: All persons who attend the sale do so at their own risk. Neither the owners, Jordan Cattle Auction nor any other persons connected with the sale assume liability, legal or otherwise, for accidents or loss of property.

BID FROM
ANYWHERE *with* LiveAg PUREBRED

1. VISIT LIVE-AG.COM
Navigate to the **"Purebred"** tab, located in the main menu. Select the auction of choice.

2. LOG IN / CREATE AN ACCOUNT
Select the **"Login or Create an Account"** button. Fill out the required fields to bid online. Agree to the terms of service, and finish with the **"Register"** button." An account is not necessary to watch an auction.

3. REGISTER TO BID
Once logged in, find your sale of choice and click **"Register to Bid"**. Agree to the terms and conditions, and click the **"Register"** button. Your request will be approved in a timely manner.

*** CALL OUR TEAM WITH ANY QUESTIONS**
We're dedicated to ensuring you have a positive bidding experience. Please call **817-533-6699** with any questions.

Using EPDs as Selection Tools

Cattle Evaluations use the term Expected Progeny Difference (EPD) to express genetic transmitting ability of a sire for the various traits listed. An EPD is a prediction of how future progeny of a sire are expected to perform in a particular trait, relative to other sires in the analysis. The key word is "difference." The EPD itself does not imply "good" or "bad" performance; rather, the EPD gives a prediction of the average "difference" to expect in the performance of a sire's progeny relative to other sires in the same analysis.

The EPD for a given trait on each animal in the analysis is compared to every other animal in the analysis. The EPD is reported as a plus or minus value in the unit which the trait is measured. EPD accuracies on non-parent animals are relatively low and are not reported in this catalog. The American Hereford Association (AHA) measures 17 traits and calculates three profit ($) indexes. A comprehensive sort of Hereford sires can also be done online at *www.hereford.org.*

Important: No across-breed EPD comparisons can be made.

Hereford EPDs and $Indexes included in our sale catalog are:

Calving Ease Direct (CED) Based on calving ease scores and birth weights and measured on a percentage. CED EPD indicates the influence of the sire on calving ease in females calving at two years of age. For example, if sire A has a CED EPD of 6 and sire B has a CED EPD of –2, then you would expect on average if comparably mated, sire A's calves would be born with an 8% more likely chance of being unassisted when compared to sire B's calves.

Birth Weight EPD (BW) An indicator trait for calving ease, measured in pounds. For example, if sire A has a BW EPD of 3.6 and sire B has a BW EPD of 0.6, then you would expect on average if comparably mated, sire A's calves would come 3 lb. heavier at birth when compared to sire B's calves. Larger BW EPDs usually, but not always, indicate more calving difficulty.

Weaning Weight EPD (WW) An estimate of pre-weaning growth, measured in pounds.

Yearling Weight EPD (YW) An estimate of post-weaning growth, measured in pounds.

Scrotal Circumference EPD (SC) Measured in centimeters and adjusted to 365 days of age, SC EPD is the best estimate of fertility. It is related to the bull's own semen quantity and quality and is also associated with age at puberty of sons and daughters. Larger SC EPDs suggest younger age at puberty.

Sustained Cow Fertility EPD (SCF) Sustained Cow Fertility EPD (SCF) is a prediction of a cow's ability to continue to calve from three years of age through twelve years of age, given she calved as a two-year-old. The EPD is expressed as a deviation in the proportion of the ten possible calvings to twelve years of age, expressed as a probability.

Maternal Milk EPD (Milk) The milking ability of a sire's daughters is expressed in pounds of calf weaned. It predicts the difference in average weaning weights of sires' daughters' progeny due to milking ability. This difference in weaning weight is due to total milk production during the entire lactation.

Maternal Milk + Growth EPD (M&G) Reflects what the sire is expected to transmit to his daughters for a combination of growth genetics through weaning and genetics for milking ability. It is an estimate of daughters' progeny weaning weight. It is equal to one-half the sire's weaning weight EPD, plus all of his Milk EPD.

Udder Suspension EPD (Uddr) Scores range from 9 (very tight) to 1 (very pendulous) and represent assessments of udder support. Weak udder suspension results in pendulous udders that make it difficult for a calf to nurse. Weak suspension in the udder indicates a lack of support in the ligament that ties the udder to the cow's body wall. Over time, weakness in this ligament will allow the udder to hang down too far from the body and may subject the udder to serious problems and increased potential for injury.

Teat Size EPD (Teat) Scores range from 9 (very small) to 1 (very large, balloon shaped) and are subjective assessments of the teat length and circumference. Oversized teats are difficult for newborn calves to nurse, and the calf may not receive adequate colostrum. This could lead to a higher incidence of scours or decreased immunity levels in the newborn calf.

Carcass EPDs

Carcass records are adjusted to an age constant endpoint. Therefore, selection based on any or all of the carcass merit EPD is comparable among cattle at the same age endpoint. For example, selection based on increased EPD for carcass weight will result in heavier carcass weights than those animals with lower EPD for carcass weights when the cattle are harvested at the same age.

Carcass Weight EPD (CW) Carcass weight is a beneficial trait when considering the impact that pounds have relative to end product value. At the same age constant endpoint, sires with higher values for carcass weight will add more pounds of hot carcass weight compared to sires with lower values for carcass weight.

American Hereford Assn. Breed Average EPDs for 2024 & 2025 calves:

CED	BW	WW	YW	SC	SCF	MILK	M&G	UDDR	TEAT	CW	REA	MARB
+3.4	+2.6	+57	+90	+1.1	+17.6	+27	+55	+1.3	+1.3	+73	+.48	+.15

Ribeye Area EPD (REA) REA EPDs reflect differences in an adjusted 365-day ribeye area measurement based on carcass measurements of harvested cattle. Sires with relatively higher REA EPDs are expected to produce better-muscled and higher percentage yielding slaughter progeny than will sires with lower REA EPDs. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

Marbling Score (Marb) Marbling EPDs reflect differences in an adjusted 365-day marbling score (intramuscular fat (IMF) based on carcass measurements of harvested cattle. Breeding cattle with higher Marb EPDs should produce slaughter progeny with a higher degree of IMF and therefore higher quality grades. Ultrasound measurements are also incorporated into this trait and have been shown to be highly correlated with the performance of slaughter progeny. All data is expressed on a carcass scale.

$Profit Indexes

2024 & 2025 calves breed average:

$BMI	$BII	$CHB
+377	+454	+124

Baldy Maternal Index $BMI) The Baldy Maternal Index is a maternally focused index that is based on a production system that uses Hereford x Angus cross cows. Progeny of these cows are directed toward Certified Hereford Beef. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake but a positive weighting on Carcass Weight, which is anticipated to provide profitability from finishing of non-replacement females and castrated males. Marbling and Ribeye Area are also positively weighted to keep the harvested progeny successful for CHB. ***This index is geared to identify Hereford bulls that will be profitable when used in a rotational cross with mature commercial Angus cows.***

Brahman Influence Index ($BII) The Brahman Influence Index is a maternally focused index that is based on a production system that uses Brahman x Hereford cross cows. Progeny of these cows are directed toward a commodity beef market, since Certified Hereford Beef does not accept Brahman-influenced cattle. This index has significant weight on Sustained Cow Fertility, which predicts fertility and longevity of females. There is a slightly positive weight on Weaning Weight, Mature Cow Weight and Milk, which accounts for enough growth but ensures females do not increase inputs. There is some negative emphasis on Dry Matter Intake but a positive weighting on Carcass Weight, which is anticipated to provide profitability in finishing non-replacement females and castrated males. Marbling and Ribeye Area are also positively weighted to keep harvested progeny successful for a variety of commodity based programs. ***This index targets producers who use Hereford bulls on Brahman-influenced cows.***

Certified Hereford Beef Index ($CHB) The Certified Hereford Beef Index is a terminal sire index that is built on a production system where Hereford bulls are mated to mature commercial Angus cows and all progeny will be targeted for Certified Hereford Beef after the finishing phase. This index has significant weight on Carcass Weight to ensure profit on the rail. As well, there is a positive weighting for Average Daily Gain along with a negative weighting on Dry Matter Intake to ensure efficient pounds of growth in the finishing phase. Keep in mind, this production system takes advantage of complimentary breeding with the commercial Angus cow. Although Marbling is weighted positively in this index, a positive weighting for Ribeye Area and a negative weighting for Back Fat are a greater priority in this index to allow for optimum end-product merit. ***This is the only index that has no emphasis on fertility. Remember that no replacement heifers are being retained.***

EPDs are updated weekly by the American Hereford Association, so we cannot guarantee the EPDs listed in the catalog. The Hereford EPDs printed are from the 10/12/26 evaluation of the AHA. View up-to-date EPDs at www.hereford.org.

Genomic-Enhanced EPDs The accuracy of breeding values in young cattle is enhanced with DNA testing. The EPDs included are genomically enhanced for the advantage of enhanced accuracy, equal to each bull already having performance on 17 of his own calves for calving ease, 8 calves for birth weight, 12 calves for weaning weight, and 9 calves for yearling weight! There is enough data backing these bulls to be able to predict how their calves are capable of performing—even before those calves are conceived.

THE POWER OF
GENOMICALLY ENHANCED EPDS

The American Hereford Association (AHA) has embraced the use of genomics into their genetic evaluation by launching a first of its kind single step analysis that utilizes the marker effects of specific traits. Likewise, AHA is directly estimating accuracy values rather than approximating. The direct estimation of accuracy results in a more conservative value but a more accurate value than previous methodologies. The AHA is producing the most reliable genetic evaluation that is supported by Whole Herd TPR™ and genomics, which will give prospective buyers added confidence in purchasing young and unproven animals.

Buying animals that have a genomic profile incorporated into their Expected Progeny Difference (EPD) offers many advantages that allow for quicker breed and herd improvement. To the right is a table showing the average increase in accuracy when buying a young animal with a Genomic Enhanced EPD (GE-EPD) versus an animal without a GE-EPD. Similarly, an effective progeny number increase is listed by trait that shows how many progeny equate to a genomic enhancement of a young animal (e.g. yearling). That's right, buying a young animal that has been genotyped is like having 2-17 progeny, depending on the trait. The proof gained on young, non-parent animals, through a genomic enhancement is valuable and greatly mitigates the risk and allows for more directed selection.

AHA TRAIT	ACCURACY IMPROVEMENT	EFFECTIVE PROGENY NUMBER INCREASE*
CALVING EASE	0.09	17
BIRTH WEIGHT	0.12	8
WEANING WEIGHT	0.14	12
YEARLING WEIGHT	0.16	9
SCROTAL CIRCUMFERENCE	0.17	6
MATURE COW WEIGHT	0.12	4
UDDER SUSPENSION	0.17	7
TEAT SIZE	0.17	7
CARCASS WEIGHT	0.11	3
FAT	0.08	2
RIB-EYE AREA	0.07	2
MARBLING	0.10	3

** Effective Progeny Number Increase (EPNI)- EPNI is the difference gained for genotyped animals versus non-genotyped animals.*

Each animal tested is recognized with the AHA GE-EPD logo.

HEREFORD $CHB© ADVANTAGE

An industry-changing program from the American Hereford Association and IMI Global to verify and add value to Hereford-influenced feeder cattle with superior genetics, health and management.

REQUIREMENTS

Source and age verification | Genetic merit: ***Minimum of 50% Hereford genetics and bull battery ranking in the top 50% of breed for $CHB index (bull battery average)*** | Two rounds of vaccinations prior to shipping: ***2 doses of 7-way, 8-way or 9-way clostridial, 2 doses respiratory modified live*** | BQA certification

BENEFITS

Genetic improvement tool | ***Sire EPD and profit index summary*** | Added market exposure | ***Free listing at HerefordMarketplace.com*** | Enrollment cost $3.25/head (verification + eID tag)

VISIT HEREFORDADVANTAGE.COM TO GET STARTED TODAY

- ✓ Homozygous Polled
- ✓ This dark cherry red Maker's Mark son is one of the most intriguing bulls we've ever offered as Lot 1. 5069 is as flawless in his design as they come—elite in his structure, deep bodied, stout, and great looking.
- ✓ He pairs his excellent phenotype with exceptional numbers as well. A 0.1 on BW EPD to over 100 on YW along with very balanced numbers across the board.
- ✓ His dam is a maternal sister to Genesis and stems from some of the stoutest cows ever produced at Barber Ranch, most notably Audrey 4075 and Abigail 8130.
- ✓ Ranks in the top 10% of the breed for BW, top 11% for Udder and top 13% for Marbling with a total of eight traits in the breed's top 20%.
- ✓ **Barber Ranch is retaining 1/2 interest in both semen and possession. Buyer may choose spring or fall possession.**

- ✓ K014 is quickly becoming one of our greatest sires. He combines Trending with a full sister to Genesis. Add that to the Anastasia bloodline on the bottom side, and Momentum is what you get.
- ✓ Both Merida and her dam, Anastasia, were five-time National Champions as well as National Show Heifers of the Year.
- ✓ This dark cherry red, highly pigmented, huge testicled bull has a ton of look and performance. He's also as friendly and kind as you could ask for.
- ✓ Base width, muscle, bone and foot size are a staple of Momentum.
- ✓ Ranks in the top 4% of the breed for YW; top 6% for WW and CW; top 7% for REA; top 11% for SC; top 12% for CHB.
- ✓ **Barber Ranch is retaining 1/2 interest in both semen and possession. We plan to show this bull at Denver and Fort Worth in January 2027. Buyer's choice of spring or fall possession will be available after Fort Worth.**

- ✓ N308 is the first calf ever being offered by our multi-National Champion Lucchese. N308's dam, F072, is our favorite Belle Air daughter of all time. She has produced multiple calves that have won on the National level as well as our Lot 1 bull in 2024, Panhandle Drifter.
- ✓ Lucchese came out of one of the most successful flushes ever produced at Barber Ranch, where three of the five calves produced were named National Grand Champions. A fourth also won the Texas state show.
- ✓ Beyond N308's pedigree though is his incredible make up. Extremely bold ribbed and deep bodied, powerfully designed, and he has the look that made his sire so popular. This one is also built to compete in the show ring. We rarely offer bulls like this lot and the next for public auction.
- ✓ Ranks in the top 5% of the breed for Milk, CW and CHB; top 11% for M&G; top 14% for Marbling; top 15% for BMI and BII.
- ✓ **Selling full interest and full possession in the buyer's choice of Lots 3 and 4.**

- ✓ This bull knows he's great. If what you're looking for is a big time prospect with both extra look and power, this may be your bull.
- ✓ This highly pigmented, smooth polled, big testicled bull has Winchester's power and is out of a beautiful cow we purchased from John Loewen. It's hard to get this kind of look and power in a package that has this kind of marbling. His disposition also makes him a pleasure to be around, which we love at the BR.
- ✓ N310 ranks in the top 2% of the breed for marbling, and for being as stout as he is only has a 2.7 BW EPD.
- ✓ Ranks in the top 2% of the breed for Marbling; top 14% for BII and CHB.

- ✓ N183 is a HORNED full brother to Lucchese. Lucchese was National Champion Polled Bull at both Denver and Fort Worth earlier this year. Lucchese also had a couple of sisters named National Champions as well.
- ✓ We pride ourselves in raising cattle that have more look than just about anyone else out there, and it's bulls like N183 and his full brothers that get us excited when we go out in the pastures and see such great looking calves.
- ✓ N183 is as striking to look at as you can make a horned bull. He has extra length of spine and extension up front, but it's his extra bone, foot size and muscle that we love. He's just an all-around great looking bull.
- ✓ We're offering seven full brothers to N183 as Lots 17–23, but we think being horned really makes him stand out.

- ✓ For cattlemen, this mating couldn't get any better. His sire is a Belle Air grandson out of a full sister to Genesis. His dam is a direct daughter of Genesis that goes back to the famed Bailee 1066 cow that Colyers purchased from us. Bailee was one of the best Sooner x Gabrielle daughters we ever raised; she was not only a National Champion herself but a producer of National Champions as well.
- ✓ Belle Air x Genesis is one of the main bloodlines we strived to raise when we purchased an interest in Genesis and all of his full sisters. We knew the progeny would be low on their birth weight, high growth, gigantic testicled, extra pigmented, and great numbered across the board. Lot 5 is no exception. This bull has it all.
- ✓ Ranks in the top 1% of the breed for SC and MCE; top 4% for SCF; top 5% for BMI; top 6% for Milk and BII; top 7% for M&G; top 10% for CW; top 15% for REA.

BW: 81 lbs. | PIGMENT: LEFT EYE 100% RIGHT EYE 100% SCROTAL 100%

- ✓ Homozygous Polled
- ✓ Another sale favorite. It seems like this year's sale features more bulls that could have been Lot 1 in previous sales than any that we can remember. So take advantage!
- ✓ N097 is a Trending son out of a tremendous Coyote Ridge Ranch donor. We bought a flush from Hampton Cornelius a couple of years ago, and this is the result. Unmatched rib and volume in a moderate package. This stout, good looking bull will sire awesome females.
- ✓ His Baldy Maternal and Brahman Influence indexes are off the charts, and with his maternal backing, he should sire some of the best black baldies or tiger stripes anywhere. Or he can be a great asset in a purebred operation. Lots of versatility with this bull.
- ✓ Ranks in the top 1% of the breed for SCF, BMI and BII; top 2% for M&G; top 3% for Milk; top 8% for WW; top 13% for MCW.

✓ Visually one of the highest performing bulls in the sale and one that we absolutely loved as a calf. Big time presence and power, all in an incredibly attractive package.

✓ His genomically enhanced BW EPD kept him out of our show string, but he'd be an excellent choice to use on Brahman cows or for anyone who wants to add extra quality and style to their calves.

✓ Ranks in the top 9% of the breed for REA; top 14% for YW; top 15% for CW.

- ✓ 5045 is about as attractive as any horned bull you will find. Dark cherry red, great pigmentation and short marked with large testicles.
- ✓ Besides his awesome looks, he also ranks at the very top of the breed for both weaning weight and yearling weight EPDs. He should really be able to add pounds to your calf crop at weaning.
- ✓ Ranks in the top 1% of the breed for WW, YW and SC; top 8% for CW; top 13% for M&G; top 14% for CHB.

- ✓ 5268 is a maternal brother to Lot 1 in the March 2026 GKB and Barber Ranch Spring Bull Sale. His Genesis dam is one of our very best.
- ✓ 5268 should add a lot of pounds and carcass advantages to his calf crop—but his daughters are what will make you so glad you invested in him.
- ✓ Ranks in the top 1% of the breed for WW and YW; top 3% for SC; top 5% for M&G, Marbling and CHB; top 10% for CW.

- ✓ 5295 is a unique breeding piece that is a combination of several proven bulls and females that have made a positive contribution to the breed. He is low birth and high growth with good REA and marbling EPDs.
- ✓ His sire, 2174, is the best overall first-calf heifer bull we have ever used—and this bull is also out of a first-calf heifer. He is moderate framed, super smooth shouldered, maybe a little finer boned than his contemporaries and beautiful fronted.
- ✓ Ranks in the top 2% of the breed for BII; top 3% for SC, SCF and BMI; top 9% for WW, YW, M&G and CHB; top 10% for CW; top 11% for Marbling.

BW: 75 lbs. | PIGMENT: LEFT EYE 100% RIGHT EYE 100% SCROTAL 100%

- ✓ Two full sisters to Genesis are represented in 5296's pedigree. Belle Air is in here twice. This extra long bodied, great profiling bull is bred to make an impact. He is low birth and high growth with excellent carcass traits. Top that off with a black tail—believed by experienced cattlemen to be a sure sign of superior fertility.
- ✓ We can't recommend these 2174 sons enough. We are calving the first daughters this fall, and they are just what we had in mind.
- ✓ Ranks in the top 2% of the breed for CW and CHB; top 3% for BII; top 4% for BMI; top 5% for MCE and Marbling; top 6% for WW, YW and REA; top 10% for SCF.

HEREFORD BRED HEIFERS

LOTS 110–125

NOTE: Heifers will sell in lot order, after the Angus bulls.

For the second consecutive year, we are proud to offer highly sought females due to overwhelming industry demand coupled with another fortunate year of timely rainfall. These sweet sixteen lots represent superior registered genetics from the heart of our females bred to our top herd sires, making them a perfect addition to a new or existing herd. With today's commercial cattle prices still topping markets, there is no better time to invest in predictable genetics that fit your goals. Whether you are looking to enhance your cow base or are just getting started, these heifer mates to the bulls selling are made to order!

AGI GE-EPD

The Angus bulls selling have Genomic Enhanced Expected Progeny Differences. EPDs that traditionally contained all pedigree, performance and progeny information now also include results from available genomic, or DNA, tests. Breeders who use genomic technology give buyers access to AGI-generated GE-EPDs that provide: increased predictability and decreased risk for young and unproven animals due to enhanced accuracy of EPDs; better characterization of genetics for difficult-to-measure performance traits (such as carcass traits, maternal traits and feed efficiency); the ability to make more rapid progress for traits that are important to you, due to more accurate selection, easier identification of genetic outliers and the ability to propagate young animals with confidence earlier in their lives. In fact, GE-EPDs on unproven animals have the same amount of accuracy as if they had recorded 8 to 33 calves, depending on the trait. That's valuable insight, offered regularly through the Angus breed's weekly national cattle evaluation at www.angus.org.

Calving Ease Direct (CED) is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

Birth Weight EPD (BW), expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

Weaning Weight EPD (WW), expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

Yearling Weight EPD (YW), expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

Dry Matter Intake (DMI), expressed in pounds per day, is a predictor of difference in transmitting ability for feed intake during the postweaning phase, compared to that of other sires.

Scrotal Circumference EPD (SC), expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

Docility (Doc), is expressed as a difference in yearling cattle temperament, with a higher value indicating more favorable docility. It predicts the average difference of progeny from a sire in comparison with another sire's calves. In herds where temperament problems are not an issue, this expected difference would not be realized.

Claw Set EPD (Claw) is expressed in units of claw-set score, with a lower EPD being more favorable, indicating a sire will produce progeny with more ideal claw set. The ideal claw set is toes that are symmetrical, even and appropriately spaced.

Foot Angle EPD (Angle) is expressed in units of foot-angle score, with a lower EPD being more favorable, indicating a sire will produce progeny with more ideal foot angle. The ideal is a 45-degree angle at the pastern joint with appropriate toe length and heel depth.

Heifer Pregnancy (HP) is a selection tool to increase the probability or chance of a sire's daughters becoming pregnant as first-calf heifers during a normal breeding season. A higher EPD is the more favorable direction, and the EPD is reported in percentage units.

Calving Ease Maternal (CEM) is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf daughters. It predicts the average ease with which a sire's daughters will calve as first-calf heifers when compared to daughters of other sires.

Maternal Milk EPD (Milk) is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

Carcass Weight EPD (CW), expressed in pounds, is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

Marbling EPD (Marb) is expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

Ribeye Area EPD (RE), expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

Fat Thickness EPD (Fat), expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

$Value Indexes An economic selection index allows multiple change in several different traits at once pertaining to a specific breeding objective. The $Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires if the sires were randomly mated to cows and if calves were exposed to the same environment.

Maternal Weaned Calf Value ($M), an index expressed in dollars per head, predicts profitability differences from conception to weaning, with the underlying breeding objective assuming that individuals retain their own replacement females within herd and sell the rest of the cull female and all male progeny as feeder calves. The model assumes commercial producers will replace 25% of their breeding females in the first generation and 20% of their breeding females in each subsequent generation. Traits included are as follows: calving ease direct, calving ease maternal, weaning weight, milk, heifer pregnancy, docility, mature cow weight, claw set and foot angle.

Weaned Calf Value ($W), an index expressed in dollars per head to predict profitability differences in progeny due to genetics from birth to weaning. The underlying objective being producers will retain 20% of the female progeny as replacements and sell the rest of the cull females and their male counterparts as feeder calves. Traits included are as follows (in no particular order): birth weight, weaning weight, milk and mature cow weight.

Feedlot Value ($F), an index expressed in dollars per head to predict profitability differences in progeny due to genetics for postweaning feedlot merit compared to the progeny of other sires. The underlying objective assumes producers will retain ownership of cattle through the feedlot phase and sell fed cattle on a carcass weight basis, but with no consideration of premiums or discounts for quality and yield grade. Traits contributing directly to the index are as follows: yearling weight (gain), carcass weight and feed efficiency.

Grid Value ($G), an index expressed in dollars per carcass to predict profitability differences in progeny due to genetics for carcass grid merit compared to progeny of other sires. The underlying objective assumes producers will market cattle on an above-industry-average carcass grid. Traits included in the index are as follows (in no particular order): carcass weight, marbling, ribeye area and fat.

Beef Value ($B), a terminal index expressed in dollars per carcass to predict profitability differences in progeny due to genetics for postweaning and carcass traits. This terminal index assumes commercial producers wean all male and female progeny, retain ownership of these animals through the feedlot phase and market these animals on a carcass grid. Traits included in the index are as follows: yearling weight, dry matter intake, marbling, carcass weight, ribeye area and fat.

Combined Value ($C), expressed in dollars per head, is an index which includes all traits that make up both Maternal Weaned Calf Value ($M) and Beef Value ($B) with the objective that commercial producers will replace 20% of their breeding females per year with replacement heifers retained within their own herd. The remaining cull heifer and steer progeny are then assumed to be sent to the feedlot where the producers retain ownership of those cattle and eventually sell them on a quality-based carcass merit grid. EPDs directly influencing a combined index: calving ease direct (CED) and maternal (CEM), weaning weight (WW), yearling weight (YW), maternal milk (Milk), heifer pregnancy (HP), docility (Doc), mature cow weight (MW), foot angle (Angle), claw set (Claw), dry matter intake (DMI), marbling (Marb), carcass weight (CW), ribeye area (RE) and fat thickness (Fat).

Targeting the Brand • Targeting the Brand • Targeting the Brand • SINCE 1978 CERTIFIED ANGUS BEEF® BRAND

Minimum Genetic Requirements

Marbling EPD (Marb)	+0.65
Dollar Grid Carcass Index ($G)	+55.0

The Certified Angus Beef® Targeting the Brand™ logo is designed to highlight registered Angus bulls with greater genetic potential to produce calves meeting the most challenging specifications of the Certified Angus Beef® brand. **Bulls must meet minimum genetic requirements of +.65 Marbling EPD and +55 $Grid** for non-parent Angus bulls to qualify for use of the Targeting the Brand™ logo. Sire-identified carcass data from more than 8,600 records in the American Angus Association database show these minimum thresholds for Marb and $G achieve an average of 50% CAB acceptance. While a sire's genetic potential only accounts for a portion of marbling performance in a calf crop, these benchmarks provide commercial cattlemen a starting place to identify genetics that will go on to bring performance premiums on quality beef grids. Cattlemen choosing to make more significant carcass advancement or those already achieving 50% or higher CAB acceptance may set bull selection criteria above Targeting the Brand™ baselines.
